Amendments to the Claims

This listing of claims replaces all prior versions, and listings, of claims in the above-identified application:

1-8. Canceled

9. (Currently amended) A method for inhibiting the replication of a microbe selected from the group consisting of *Lactococcus lactis*, *Clostridium difficile* and ~~*Clostridium*~~ *Clostridium perfringens*, in the gastrointestinal tract of an animal, comprising administering to an animal a composition comprising an isolated *Bifidobacterium* that secretes a siderophore that inhibits growth of *Lactococcus lactis* wherein the composition comprises substantially no free iron, comprises an iron chelator, or a combination thereof, and measuring the presence of said microbe that was present in the gastrointestinal tract of the animal prior to administration, where a decrease in the presence of the microbe in the animal after administration of the *Bifidobacterium* indicates inhibition of the replication of the microbe.

10. (Original) The method of claim 9 further comprising growing the *Bifidobacterium* under iron limited conditions before administration.

11. (Original) The method of claim 10 wherein growing the *Bifidobacterium* under iron limited conditions comprises growth in the presence of an iron chelator.

12. (Original) The method of claim 9 wherein the animal is a human.

13-14. Canceled

15. (Original) The method of claim 9 wherein the gastrointestinal tract is the large intestine.

16-19. Canceled

Amendment Under 37 C.F.R. §1.312

Applicant: O'SULLIVAN

Serial No.: 09/884,894

Filed: June 19, 2001

For: ISOLATED BIFIDOBACTERIA THAT PRODUCE SIDEROPHORES WHICH INHIBIT GROWTH OF
LACTOCOCCUS LACTIS

-
20. **(Previously presented)** A method for establishing a Bifidobacterium flora in the gastrointestinal tract of an animal comprising administering to an animal a composition comprising an isolated Bifidobacterium that secretes a siderophore that inhibits the growth of *Lactococcus lactis*, wherein the composition comprises substantially no free iron, comprises an iron chelator, or a combination thereof, and measuring the presence of the Bifidobacterium in the gastrointestinal tract of the animal after administration.
21. **(Original)** The method of claim 20 further comprising growing the Bifidobacterium under iron limited conditions before administration.
22. **(Original)** The method of claim 20 wherein the gastrointestinal tract is the large intestine.
23. **(Original)** The method of claim 20 wherein the animal is a human.
24. **(Original)** The method of claim 23 wherein the human is an infant selected from the group consisting of an immature infant, a premature infant, and a mature infant.
25. **(Original)** The method of claim 23 wherein the administration occurs after the human has undergone antibiotic therapy.
26. **(Original)** The method of claim 23 wherein the administration occurs after the human has undergone chemotherapy.
27. **(Currently amended)** A method for preventing the replication of microbes selected from the group consisting of *Lactococcus lactis*, *Clostridium difficile* and ~~*Clostridium*~~ *Clostridium perfringens* in a food, the method comprising adding to the food a composition comprising an isolated Bifidobacterium that secretes siderophore that inhibits growth of *Lactococcus lactis*, wherein the composition comprises substantially no free iron, comprises an iron chelator, or a combination thereof.

LACTOCOCCUS LACTIS

28. Canceled

29. (Previously presented) A composition comprising an isolated *Bifidobacterium* that secretes a siderophore that inhibits growth of a *Lactococcus lactis*, wherein the composition comprises substantially no free iron, comprises an iron chelator, or a combination thereof.

30. (Previously presented) A method for obtaining a secreted siderophore that inhibits the growth of *Lactococcus lactis* from an isolated *Bifidobacterium*, the method comprising incubating the isolated *Bifidobacterium* under iron limited conditions, and isolating the siderophore.

31-37. Canceled

38. (Currently amended) A method for inhibiting the replication of a microbe selected from the group consisting of *Lactococcus lactis*, *Clostridium difficile* and *Clostridium perfringens* in a composition, the method comprising adding to the composition a secreted siderophore that inhibits the growth of *Lactococcus lactis* obtained from an isolated *Bifidobacterium*.

39-40. Canceled

41. (Previously presented) A composition consisting essentially of an isolated *Bifidobacterium* that secretes a siderophore that inhibits growth of a *Lactococcus lactis*.

42-43. Canceled

44. (Previously presented) A composition comprising an isolated *Bifidobacterium* that secretes a siderophore which inhibits growth of a *Lactococcus lactis*, and a food, wherein said composition is substantially free of iron, comprises an iron chelator, or a combination thereof.
